## JS

**JS minify settings:**

☑ Enable

Operations in areas:

Before &lt;/head&gt; ⦿ Minify ◯ Combine only

Embed type:

Default (blocking) ⬍

☑ Preserved comment removal (not applied when combine only is active)
☑ Line break removal (not safe, not applied when combine only is active)

**Save all settings**

## CSS

**CSS minify settings:**

☑ Enable
☐ Combine only
☑ Preserved comment removal (not applied when combine only is active)
☑ Line break removal (not applied when combine only is active)

**@import handling:**

None ⬍

**Save all settings**

## Advanced

☑ **Disable minify automatic file name length test**
*Do not automatically attempt to determine the optimal file name length minify files created in auto mode.*

**Filename length:** 150

*Change this value to decrease or determine the number of minified files that are generated. The more CSS / JS files you have the more files will be generated because their file names are combined in the final URL of the minified file name. File name length is only applicable when minify is in auto mode and file name length testing is enabled. The maximum file name length value is 246.*

**Update external files every:** 86400 seconds

*Specify the interval between download and update of external files in the minify cache. Hint: 6 hours is 21600 seconds. 12 hours is 43200 seconds. 24 hours is 86400 seconds.*

**Garbage collection interval:** 86400 seconds

*If caching to disk, specify how frequently expired cache data is removed. For busy sites, a lower value is best.*

**Never minify the following pages:**

*Always ignore the specified pages / directories.*

**Never minify the following JS files:**

wp-includes/js/jquery/jquery.js
wp-includes/js/jquery/jquery-migrate.min.js

*Always ignore the specified JS files.*

**Never minify the following CSS files:**

*Always ignore the specified CSS files.*

**Rejected user agents:**

*Specify user agents that will never receive minified content.*

**Include external files/libaries:**

https://ajax.googleapis.com

*Specify external files/libraries that should be combined.*
